

AQUATIC FEEDING ROBOTIC BOAT

# ROBEED

Robeed is a company that produces a smart boat robot to feed fishery ponds.

## PRODUCT DESCRIPTION

Robeed is a company that produces a smart boat robot to feed fishery ponds. One of the high costs of raising fish, shrimp, crabs, etc. is the cost of food. This smart boat is to move intelligently on fish breeding ponds, etc., and feeds the fish in a certain amount at a specific time and location according to the defined program.

The electricity required for this boat is from the solar panel and the movement of this boat is with the help of the intelligent system and the feeding system of this boat is working by adjusting the engine speed and rotating the spraying blades.

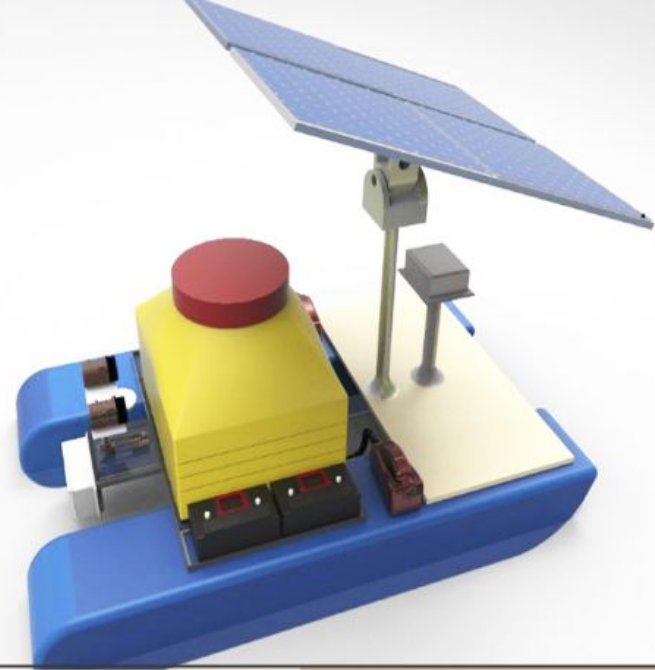

With the help of the control system and program written for this boat and the mechanized system of food spraying blades and solar panels installed, It turns on automatically 24 hours a day on fish breeding ponds, etc. The food tank and its size are changeable. And the control system installed is adjusted for different times and conditions for food

# FEATURES

1. Reducing fish farming costs
2. Increased productivity
3. Reducing physical labor
4. Programmability
5. Portable
6. Light weight
7. Water proof

# INNOVATIVE POINTS OF ROBEED

1. Intelligent and adjustable blade system with a special angle for food distribution
2. Control system and programmed board for 12-volt power consumption and boat control system
3. Designing a special body for placing equipment with the same balance on water
